

Children's Traffic Playground

Basic Information

Children's traffic playgrounds are designed for traffic education of children. They are primarily used for traffic education organised by schools, however, they are also often accessible by the public on an individual basis.

Importance of Children's Playgrounds

- Teaching kids the basic rules of traffic on communications
- Simulating regular traffic in a fun and practice-oriented way
- Possibility of real situations training in a safe environment
- Using a miniaturised model road network
- Possibility of using circuses and intersection crossings with traffic signs
- Crossings may also be equipped with light signalisation, including pedestrian and grade crossings
- Kids may go through traffic situations on bikes, scooters or in kids' mini-cars.

Children's Traffic Playgrounds Equipment

- Horizontal traffic signage
- Vertical traffic signage
- Light signalisation devices
- Special switchboard for controlling signal devices.

Playgrounds Sections

ELTODO dopravní systemy, s.r.o. possesses, thanks to its business orientation, long-term experience applicable even for children's traffic playground design. We cooperate not only in developing new children's traffic playgrounds, but also in reconstructing existing ones.

These playgrounds may also include a **computer teaching room** we are able to furnish with quality computers and software. The rooms of this kind are primarily designed for school training, obtaining knowledge and experience in the area of traffic education, forming the right habits, and other skills. Thus, kids are instilled with discipline and carefulness, and, at the same time, their skills and habits influencing their behaviour in specific traffic situations are developed.
