

Type PO Pictogram

Basic Information

With their design, the two-sided luminous panels (pictograms) are suitable for placing a lit-through logo for indicating companies, for creating a company's or commercial sign, for information and other purposes.

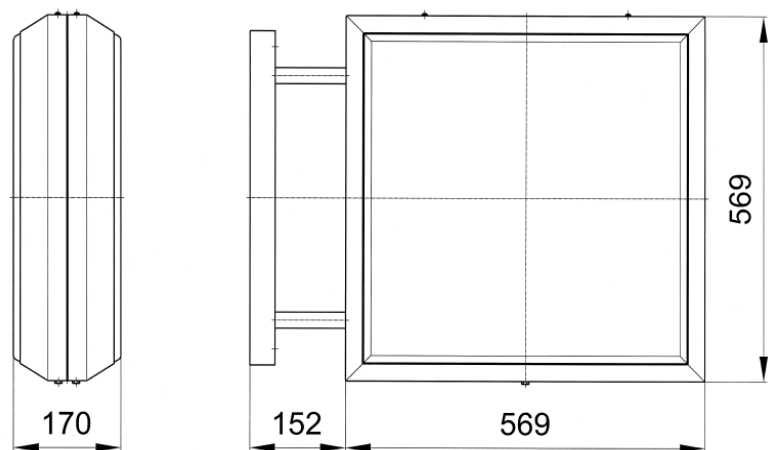

Their simple appearance and unobtrusive design make them suitable for placing within urban residential areas, on buildings and also for internal applications.

Technical Description

The two-sided luminous eye-catchers are available as a type product (Refer to dimensions). The eye-catcher's structure is made of steel channels and finished with custom-paint. The front and rear walls are made of clear or matt polyacrylate with the glued on pictogram, logo, or company's indication, or a commercial text placed on adhesive film or screen-printed. The manufacturer performs the gluing or printing as per customer's specifications. Polyacrylate mouldings with the sticker are fixed to the panel body over sealing and secured with a frame fastened with three screws. A circular fluorescent tube is used for illumination.

The eye-catchers are furnished with a console for vertical or horizontal fixing.

Dimensioned Drawing

Basic Technical Data

Name:	Two-sided luminous panel
Type:	PO
Luminous source:	18, 36 W circular fluorescent tube
Flash frequency:	1 Hz
Protection:	IP43
Rated voltage:	230V / 50Hz
Input:	As per the luminous source used
