

HS 03 HISTORIC POLE

Type: HS 03

Basic Information

The **HS 03 VYSEHRAD historic pole** is suitable for ancient parts of cities, parks and gardens where it highlights their unique atmosphere.

As a suitable addition, the HLP 98 historic lamp replica can be used with the pole.

This type of pole combined with the lantern was used for the first time in the reconstruction of the Kinsky Garden in Prague.

Technical Description

The pole body is welded from **steel tubes** of various diameters. Transitions between single diameters are decorated with figurative iron-cast adapters. In the clamping point, the pole is reinforced with an anticorrosion gaiter.

The corresponding pole equipment can be placed in the pole foot. The finish is carried out with metallic synthetic coating tinted as per the customer's wish. As standard, the pole is supplied with the "Old Prague Green" tint. The pole is manufactured in two lengths: 3.7 and 4.7 m.

The poles are placed into steel tube protectors firmly embedded in a concrete grounding.

The decorative crossbar in the upper section of the pole allows using a ladder for servicing the lighting fixture in locations where the use of a high-lift platform is impossible.
